

Orthodontic Patient Instructions

Patient Instructions following Cosmetically Focused Orthodontic Treatment

Keeping a healthy smile

Braces create small ledges, nooks, and corners for food to collect, which can lead to cavities and gum problems. This makes brushing and cleaning between your teeth even more important while you're wearing braces. When you clean your teeth, handle your appliances carefully so you won't break or loosen them. We strongly recommend a hygienist appointment following the fitting of your braces as she will demonstrate how best to keep your teeth and gums healthy as well as cleaning your teeth thoroughly.

The following tips will help keep your appliances and smile healthy:

Eating first days

Although some patients are able to eat or drink almost anything while in braces and have no ill effects, there are certain dietary habits that are known to cause breakage of orthodontic appliances as well as increasing the risk of dental disease. Our aim is to achieve the treatment goals with as few disturbances due to appliance breakage as possible, and minimize the side effects of poor diet choices. Remember, teeth move their best in a healthy environment and in individuals with excellent overall health. Be sure you have a well-balanced diet.

Potential harm to your teeth and gums

Foods and drinks which your dentist has suggested may cause dental caries (cavities) should be restricted while wearing braces. Sticky foods are to be avoided because of the increased risk of dental decay and appliance breakage. These foods stick to braces and remain on your teeth for long periods of time. If foods or drinks high in sugar content are to be consumed, we advise having them with regular meals or at one given time of day. Please make sure that careful brushing and rinsing take place immediately afterwards. Between meal snacks should be

confined to foods without refined sugar and should be followed by tooth brushing or vigorous rinsing if a toothbrush is not available.

The following foods can be particularly harmful to your teeth while wearing braces:

- Sticky food or sweets of any kind (toffee, caramels, hard-boiled sweets, chocolates etc).
- Hard foods such as crusty bread.
- Fizzy drinks (including diet drinks).
- Popcorn.
- Seeds in the shell (sunflower and pumpkin seeds).

Potential harm to your braces

Braces are attached to your teeth with an adhesive which normally will withstand the forces of eating. However, braces can be dislodged and wires bent or broken while eating certain foods. Hard foods, such as nuts, hard sweets, crusty bread, crisps and so on can harm your braces and should be avoided. Chewing ice cubes, pencils and fingernails can also be very destructive to your appliances. Foods such as apples, raw carrots or celery are healthy snacks, but must be cut to avoid damaging your braces.

Chewy foods such as caramels and even thick bread crusts can bend and distort wires causing treatment delays and extra visits and cost for repairs. Popcorn can cause harm in multiple ways. The husks from the popcorn can become lodged beneath the braces and cause irritation to the gum tissue. Unpopped kernels can shear or break off brackets as well as bend or dislodge wires.

[Remember if you have any questions about dietary restrictions or good food choices, PLEASE ASK!](#)

The adhesive used for attaching the braces to your teeth cures rapidly initially. You can eat any time after leaving our office, however, we ask that you be mindful of the suggested eating list for foods that may be harmful to braces. Until you become accustomed to eating with your new braces, you may find it beneficial to follow a diet consisting of soft foods for a few days.

The wire on your braces is attached by small rubber O-rings or “doughnuts”. These will discolour if you eat or drink dark foods such as curries, tomato-based sauces, black coffee, red wine etc. However, the doughnuts are usually changed at each review appointment. You need to brush effectively and not too hard – brushing too hard may remove the tooth coloured coating on the wires.

Will the braces cause discomfort?

Initially the braces feel like they “stick out.” This is normal. As you become accustomed to your braces and tooth alignment improves, this sensation will cease to be a concern. Although the brackets are round and smooth, until the cheek tissues have “toughened,” you may find it helpful to use a small piece of wax around the bracket that is creating the irritation. If your supply of wax runs out, call our practice for more. We also recommend rinsing with warm salt water three times a day. Your dentist or pharmacist can recommend preparations to soothe cheek irritations.

You will probably notice some discomfort beginning a few hours after your braces are placed. Some teeth, usually the front teeth, may be “tender” and sensitive to pressure. Occasionally, patients report that they experience no discomfort, but most have some soreness beginning during the first eight hours and dissipating within the week. Exactly when the discomfort ceases is impossible to predict and differs with each patient. Non-prescription pain remedies are recommended for discomfort. For maximum effectiveness, it may be best to take such medications before the discomfort begins.

Before leaving the practice

There are routine steps that we ask you to take prior to leaving the practice. These steps will minimize discomfort related to irritation from the braces and ensure an optimal response to treatment.

Please make these steps a part of each office visit:

- Using your finger and tongue, check that wire ends do not extend into areas which might poke or abrade the tongue or cheek.
- Make sure you understand what you are to do until your next appointment. This could include wearing elastics as instructed, activating an expander or following specific hygiene or diet instructions.

- Make sure you have an adequate supply of orthodontic wax, special cleaning aids or other related materials you may need between appointments.
- Always schedule your next appointment before leaving the office. Waiting 1-2 weeks after an appointment to schedule your next office visit complicates the scheduling process, since appointments are programmed 4-6 weeks in advance.
- Schedule a cleaning appointment.

If you have any questions or if any problems arise whilst wearing your braces, please contact the practice.
